Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 - 4, drawn to method of manufacturing a stator, classified in Class 29, subclass 569.
 - II. Claims 5-12, drawn to dynamoelectric rotary machines, classified in Class 310.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the claimed stator can be made by engaging at least two poles before winding a metal wire around the poles.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

A telephone call was made to J. Ernest Kenney on August 26, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made. Several attempts to communicate with the aforementioned attorney were tried, but he was not reached.
